FIBROBLAST PLASMA TREATMENT : PLEXR

WHAT IS FIBROBLAST PLASMA TECHNOLOGY

Plasma fibroblast therapy uses a medical device that discharges a high-frequency electric current to small areas of the skin. The plasma tip doesn't directly touch the skin, but instead releases a targeted current just above the skin. This creates fractionated channels at controlled depth into the connective tissue layer of the dermis. These micro-injuries stimulate fibrocytes to increase collagen, but more importantly, causes an immediate contraction of connective tissue fibres. This results in dramatic tightening of non-elastic skin and removal of excess skin. Better known as plasma soft surgery.

UPPER EYELIDS
LOWER EYELIDS
STOMACH & NAVAL
ELBOWS
KNEES
PITTED ACNE SCARS
STRETCH MARKS
